

EXE

When you build and run a project, Visual Studio will create a variety of other temporary or internal files that you should mostly not have to worry about. When you see files like *.ncb, *.suo, *.obj, just leave them alone. The output you are most interested in is the ".exe" file, which is the executable program you have created!

Click through the folder structure until you find the Debug folder, this is where your .exe will be located. Just copy it and move it.

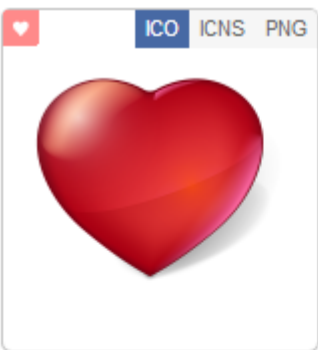

Project 08 - Change ▶ Change ▶ Change ▶ bin ▶ Debug

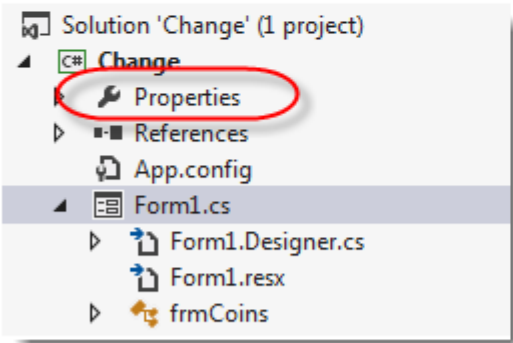

EXE ICON

If you notice my .exe has a nice little icon on the left side of the name.  Change.exe To change your icon from the default one:

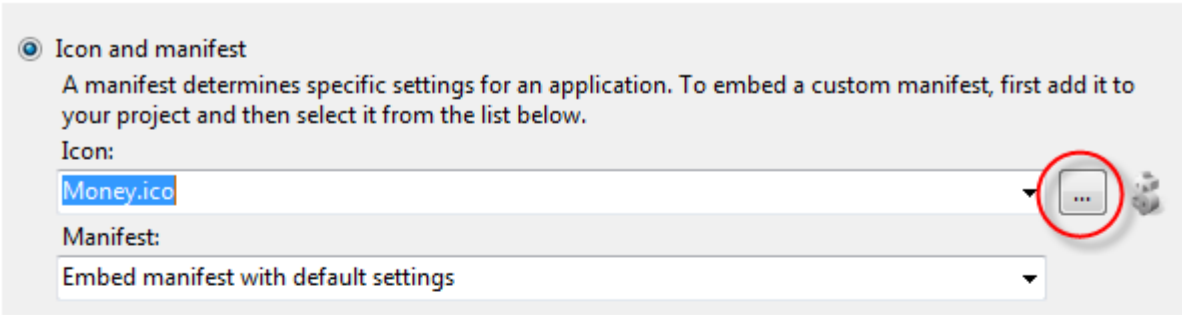

- Go to <http://www.iconarchive.com/> to find and download your icon.
- Hover your mouse over the picture you want to use and click on the word ICO to start the download process.

- Double click on the word Properties in your solution explorer.

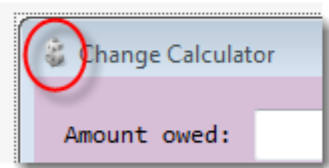

- Click on the ... and select your photo in the Icon and manifest section.

- Double click on the Form1.cs in your solution explorer to return to your form.
- Your icon will appear on your .exe the next time you run your project.

FORM ICON

If you noticed, your form also has a little icon in the upper left side that you can change.

- Simply click on the form and go to the ICON property and select your .ico file.
