

## Configuring Eclipse to Run JavaFX

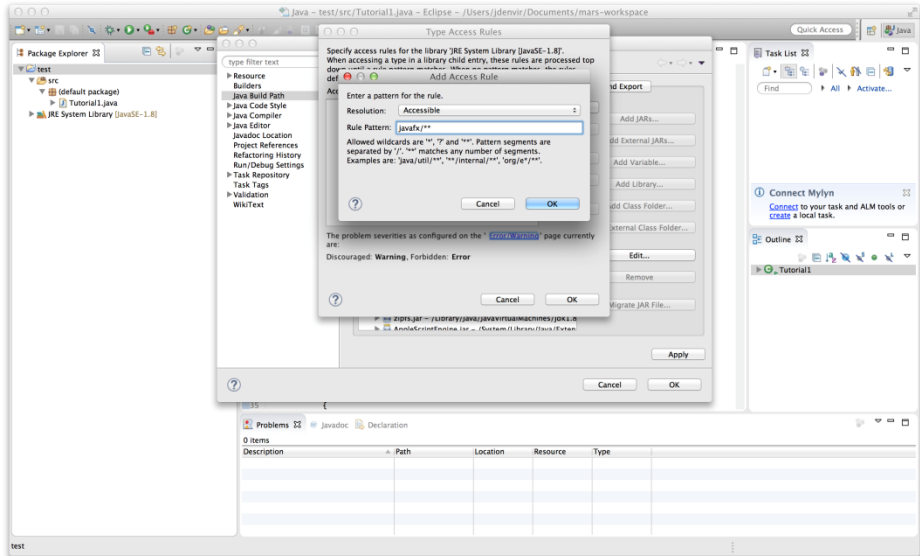

Right-click on the project and bring up the project properties dialog. Select "Build Path" in the left pane, and select the "Libraries" tab. You will see a "JRE System Library" entry. Expand that entry, and you will see an "Access Rules" subentry:

Select the "Access Rules" entry and click "Edit". Click "Add".

Under "Resolution", choose "Accessible", and under "Rule Pattern", enter `javafx/**`:

Click OK to exit all the dialogs.
